

Introducing COMPACT™

The FlexiPole Compact is a low profile pole for counter tops which need to save space and minimise the height of their card payment machine mounting solution. At less than half the height of our Complete, the Compact stands at 7cm. It offers all the advantages of our other FlexiPole products with the exception of rotation. Tilt capabilities are fully present.

Do you need to mount your PIN Entry Device (PED)?

Mounting your card payment machine saves you money by reducing cable damage and wear and tear on the device. Mounting also allows you to create the best possible check out experience for your customer, minimising clutter and creating an attractive and efficient environment.

PEDPack or FlexiGrip?

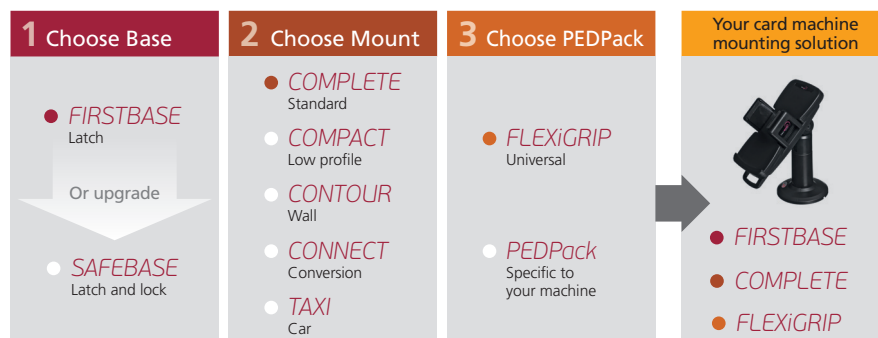

FlexiPole™ is such a secure system because we supply an individually tailored 'back' for your card payment machine (a PEDPack) which allows our unique latching mechanism to engage with your base. A list of all the card machine models we currently support is available on our website. We can also create a bespoke solution for you, just get in touch to find out more. Alternatively, if you're not sure of your choice of payment machine, our FlexiGrip product is a great solution and works with any payment machine.

FlexiGrip?

A universal mounting product, the FlexiGrip will securely hold almost any payment machine and has an attractive shape with a small lip at the foot of the mounting platform to support the PED and foam 'grippers' housed in strong 'arms' formed from moulded plastic. The foam grippers are supplied with high friction pads, so just remove the protective film to securely stick your payment machine in place.

Choose your FLEXiPOLE: Example

Get the right FLEXiPOLE combination and create your ideal card payment mounting solution

FlexiPole™ is a range of specialist Point of Sale solutions for mounting card payment machines, terminals and Pin Entry Devices (PEDs).

Why choose FLEXiPOLE™?

Expertise

We know all about card machines and mounting at Point of Sale. Our products are packed with design-lead features which put us ahead of the competition.

Price point

50% cost saving on an average installation in comparison to our competitors.

Security

Retailers must comply with PCI DSS, maintain security for customer card data and ensure the card payment machine itself is secure from theft or interference. FlexiPole's PedPacks prevent access to the rear of the card machine and our secure latching mechanism makes stealing the machine extremely challenging for criminals.

Works with

FLEXiPOLE™

Which Base?

Your Contour wall mount can be used with either our FirstBase or SafeBase product, depending on the level of security required for your installation:

FIRSTBASE

Our bestselling base, suitable for the majority of retail locations, FirstBase can be used with any of our mounting solutions. Our unique latching mechanism is fitted as standard.

The latch can be released easily at the back of the mount allowing the machine to be passed directly to a customer, for example to a wheelchair user.

You can upgrade your FirstBase to SafeBase in a simple process, contact us for more details.

Upgrade FIRSTBASE to SAFEBASE

It's easy to upgrade your FirstBase to SafeBase whenever you like, giving you the option to choose added security from first purchase or wait until you're fully installed first. Contact us for more details.

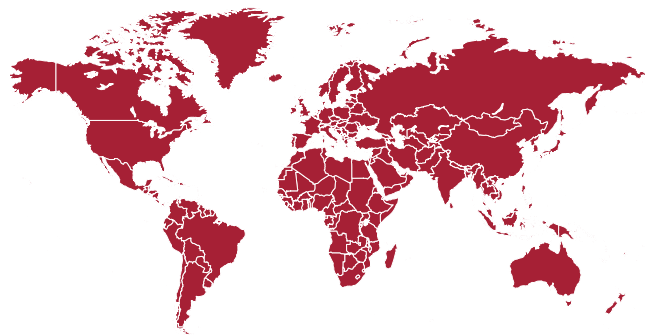

SAFEBASE

SafeBase is our secure 'lock and key' base which ensures your card payment machine is completely safe from theft and malicious interference by latching the unit in place and then locking the latch in place with a key. This makes it almost impossible for anyone to gain access to the back of the machine or to steal it.

SafeBase can be used with any of our mounting solutions and offers our most secure base for your payment machine. Keys can be supplied which are unique to each stand, unique to each retail location or with universal keys for your installation.

Globally Trusted Supplier

FlexiPole™ products are currently installed in locations around the globe.

Additional Information

Cabling: two channels are supplied as standard within the pole for cabling.

Installation: FlexiPole™ can be drill or adhesive mounted, it's quick, easy and full instructions are supplied. A high bond adhesive pad is included with all counter top poles.

Accessibility: FlexiPole™ products are fully compliant with the UK's 1995 Disability Discrimination Act.
